1. Create a new android app with Google Map
2. In there should able to draw a custom shape.

3. Next, you'll need to draw a line crossing any two positions along the path.

4. After that user can enter the no of rows to divide these line withing the shape.

Above example I enter divide to 8 rows then it divides to equal 8 parts.

5. Add a clear all function to clear the map
6. Advance
   - Allow user to drag from the corners and change the shape
   - Show the area of the shapes somewhere near the shape
